

Lesson: Fruits and Their Benefits

Fruits are parts of plants that often grow from flowers. Many fruits have seeds inside them. Fruits are important because they give our body vitamins, water, and energy. Eating different fruits helps us stay healthy and strong.

Examples of fruits include mango, apple, banana, orange, guava, grapes, and watermelon. Some fruits are sweet, some are sour, and some are juicy. We should wash fruits before eating them. Fresh fruits are usually healthier than too many sweets or fried snacks.

Key Words

- Fruit
- Seed
- Vitamins
- Healthy food
- Fresh
- Sweet
- Sour
- Juicy

Local Examples

- Mango is a sweet summer fruit.
- Orange and guava can taste sweet or sour.
- Watermelon has many seeds and a lot of water.
- Banana is soft and gives quick energy.

Class Activity

The teacher draws three columns on the board: Fruit Name, Taste, and Seeds. Students name fruits they know, then decide whether each fruit is sweet, sour, or juicy and whether it has seeds.

Quick Questions

- Name two fruits you eat at home.
- Why should we wash fruits before eating them?
- Which fruit has many seeds?

- How do fruits help our body?
- Which fruit is sweet and which fruit is sour?

Homework

- Draw three fruits and write their names.
- Write two sentences about your favorite fruit.
- Ask someone at home which fruit they like and why.
